追求优雅的代码

用设计模式让代码更优雅

场景下的最佳解决方案

复用代码 提升维护性 提升性能

.....

无处不任」

观察者模式

```
const div = document.createElement('div')
div.addEventListener('click', event => {
  console.log('click 1.')
})
div.addEventListener('click', event => {
  console.log('click 2.')
})
div.click()
```

观察者模式

```
const div = document.createElement('div')
const handleClick = (event: MouseEvent) => {
 console.log('后面某些时间可能会被移除~')
div.addEventListener('click', handleClick)
setTimeout(() => {
 div.removeEventListener('click', handleClick)
}, 3000)
```

```
1 class Human {
    public name: string
    constructor(name: string) {
       this.name = name
     getName() {
       return this.name
 8
     sleep() {
       console.log('...')
10
11
12 }
13
14 class Zong extends Human {
    constructor(name: string) {
16
       super(name)
17
18
     sayName() {
       console.log(`Hello, My name is ${this.name}`)
19
20
21
     sleep() {
       console.log('呼~')
23
24 }
```

```
import { hasOwn } from '@vue/shared'
const obj = {
 hasOwnProperty(key: string) {
   return true
console.log(obj.has0wnProperty('zong')) // 有风险的使用方式
console.log(Object.prototype.hasOwnProperty.call(obj, 'zong')) // 正确的使用方式
console.log(hasOwn(obj, 'zong')) // 正确的使用方式
```

```
class Father {
 say() {
   console.log('我是父')
class Child extends Father {
  say() {
   // super.say() 加上这个会打印?
   console.log('我是子')
const child1 = new Child()
child1.say() // ?
```

```
class Father {
  say() {
    console.log('我是父')
class Child extends Father {
  say() {
    super.say()
    console.log('我是子')
const child1 = new Child()
const child2 = new Child()
child1.__proto__.say = () => { console.log('我是谁') }
console.log(child1.say())
console.log(child2.say())
```

Mixin 模式

```
1 class Zong extends Human {
2  constructor(name: string) {
3    super(name)
4  }
5   sayName() {
6    console.log(`Hello, My name is ${this.name}`)
7  }
8   sleep() {
```

console.log('呼~')

console.log('嗨~')

console.log('呼~~')

24 const zong1 = new Zong('1')

22 Object.assign(Zong.prototype, mixin)

10

12

14

15

16

18

19

21

20 }

11 }

13 const mixin = {

sayHi() {

sleep() {

},
