追求优雅的代码

让工作更具挑战,让编码充满乐趣

简洁・自然・易读

用代码来阐述

```
1 interface Item {
       value: boolean;
 3 }
 4
  5 const list: Array<Item> = []
 6
  7 list.map(item => {
       item.value = true
 9 })
 10
 11 list.forEach(item => {
       item.value = true
13 })
14
15 list.map(item => ({ ...item, value: true }))
```

好的注释

```
1 /**
2 * Item 开关按钮
3 * @prototype {Boolean} value 是否开启
4 */
5 interface Item {
6  value: boolean;
7 }
```

巧用命名空间

```
1 interface Switch {
     enabled: boolean;
3 }
4
5 const switchs: Array<Switch> = []
6
7 switchs.forEach(switch => {
      switch.enabled = true
8
9 })
```

专一·纯粹

```
1 interface Switch {
       enabled: boolean;
 3 }
 4
 5 const switchs: Array<Switch> = []
 6
 7 const enabledSwitchs = () => {
       switchs.forEach(switch => {
 8
           switch.enabled = true
 9
       })
10
11 }
12
13 enabledSwitchs()
```

台生自出

高性能

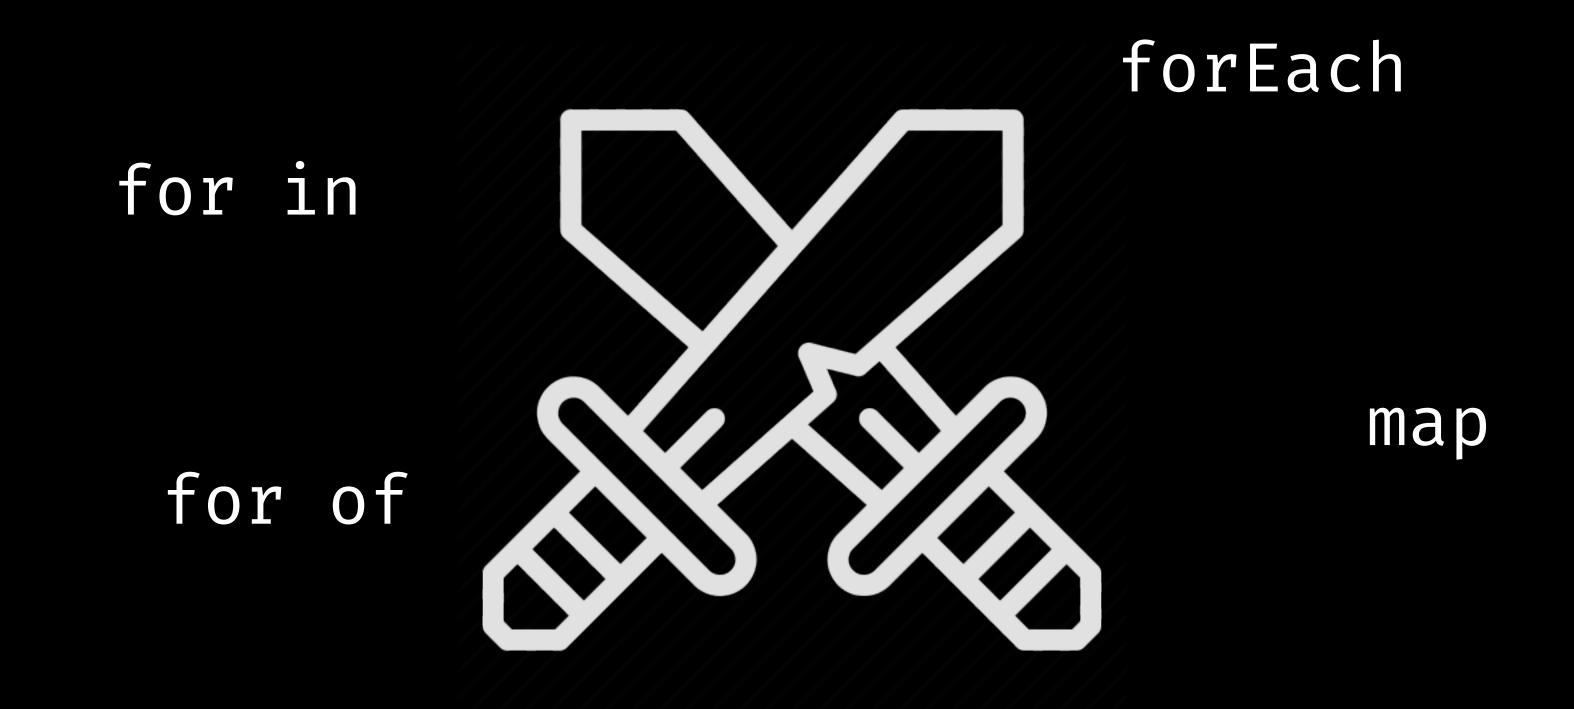

有名的较量

while

避免重复执行

```
1 export const doSoming = () => {
       if (process.env.NODE_ENV === 'production') {
           return proDoSoming()
       return devDoSoming()
 6 }
 8 /* 另一种 */
  9 export let doSoming: () => void
 10
11 const initDoSoming = () => {
       if (process.env.NODE_ENV === 'production') {
           doSoming = proDoSoming
 13
 14
       doSoming = devDoSoming
 15
 16 }
17
18 initDoSoming()
```

空间换时间

```
1 const cache: Record<string, number> = {}
 3 export const memoizeAdd = (a: number, b: number) => {
      const key = [a, b].join()
4
      if (cache[key]) {
          return cache[key]
6
      cache[key] = a + b
8
      return cache[key]
10 }
```

空间换时间

```
1 const cache: Record<string, number> = {}
 3 export const memoizeAdd = (a: number, b: number) => {
      const key = [a, b].join()
4
      if (Object.hasOwnProperty.call(cache, key)) {
          return cache[key]
6
      cache[key] = a + b
8
      return cache[key]
10 }
```

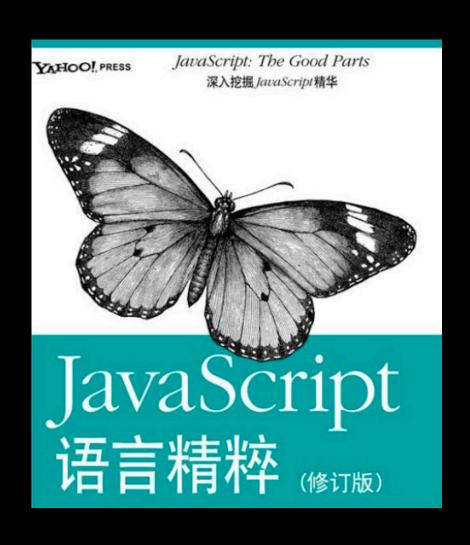

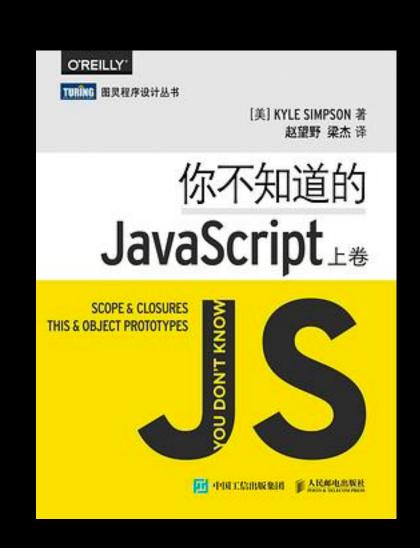

是维护

设计模式。架构设计

多看,多尝试

多看,多尝试

```
1 **/*eslint semi: ["error", "always"]*/
2
3 var name = "ESLint"
4
5 object.method = function() {
6    // ...
7 }
```

```
1 d /*eslint semi: "error"*/
2
3 var name = "ESLint";
4
5 object.method = function() {
6    // ...
7 };
```

```
1 🁎/*eslint use-isnan: "error"*/
3 if (foo == NaN) {
     // ...
7 if (foo != NaN) {
```

```
1 👍/*eslint use-isnan: "error"*/
3 if (isNaN(foo)) {
     // ...
6
7 if (!isNaN(foo)) {
8
```

保持一颗优雅的心

保持一颗优雅的心

- 知识运用,持续优化
- 活跃关注,不断提升

总之, 坚持你的坚持。
